Subject: Showing ADOT permanent easements on ROS

The ADOT R/W Plans Section is now requesting that the On-Call Consultants show all ADOT owned permanent easements on the Results of Survey drawing. Typical examples of these are drainage easements, slope easements and flowage easements.

Another example is a highway setback line that occurs on some sections of highway within the National Forest lands.

Typically, the permanent easement will be portrayed in a simple manner. The only things that will be illustrated will be the linework and a label. No stations, geometry, point numbers or coordinates will be shown.

Standard exhibit F3 has been revised to show an example.

The On-Call will utilize the existing R/W plans, the existing R/W report, and other available documentation to discover and calculate the easements.

This policy is effective immediately.

The boilerplate scope of the Initial Survey has been revised to add this new requirement.
